DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 13 and 19 of U.S. Patent No. 6,631,139. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-4 are a broadened version of claims 13 and 19 of 6,631,139.

With regards to claims 1, 3, '139 teaches Apparatus comprising: means for extracting gain and spectral information from a plurality of continuous non-active speech frames ('139, col. 12 lines 13-14), means for

averaging the gain and spectral information to attain an average gain parameter and a average spectral parameter ('139, col. 12 lines 15-17), means for generating at least one discontinuous non-active speech frame using the average gain parameter and the average spectral parameter.('139, col. 12 lines 23-25).

With regards to claims 2, 4, '139 teaches Apparatus comprising: means for extracting comfort noise information from a plurality of continuous non-active speech frames ('139, col. 13 lines 1-6, SID frame contains comfort noise), means for averaging the gain and spectral information to attain an average gain parameter and a average spectral parameter ('139, col. 13 lines 7-10), means for generating at least one discontinuous non-active speech frame using the average gain parameter and the average spectral parameter.('139, col. 13 lines 11-13).
